- Shapes and colours distinguish the type of safety
- Symbols communicate the specific safety message
- Adhere to documents, machinery, packaging and other areas requiring safety symbol messages
- Compliant to ISO 7010:2011 standard

High-performance, self-adhesive vinyl with overlaminate graphics for long wear and durability.
Available in two sizes — specify when ordering.

ISO labels are available in three categories distinguishable by their shape and colour format:

Mandatory - take action to avoid the hazard.

Prohibition - forbid an action to avoid the hazard.

Warning - identify the hazard to avoid.

PIPE MARKERS – WHAT YOU NEED TO KNOW

ACCUFORM.

The proper marking of contents and flow direction in pipes and piping systems is a vital component of a thorough safety and identification program.

Pipe markers are quick visual cues, providing immediate identification information of pipe contents for emergency responders and workers to safely carry out their responsibilities when working in and around piping systems.

The legend or wording on the pipe marker is to be the primary means of naming the contents of the pipe. The name is to be brief, yet complete or in understood abbreviated format. Arrows are to accompany the legend to indicate the directional flow of the contents. Additional information may be necessary to identify the content details such as pressure and temperature.

Installation recommendations:

- Above or below centre visual line of pipe
- Frequent intervals on straight pipe runs (visible from any point along the length)
- Close to valves
- Near branches and T's in piping
- Any change in direction of piping
- Near points before and after pipe going through walls, ceilings, and floors

ASME

A13.1 – 2007 scheme for the identification of piping systems... A uniform system for the identification of piping contents has been established to warn personnel when the piping contents are inherently hazardous... This standard has been prepared to specify the identification of the contents of piping systems on the basis of legends, it also suggests the use of colour as a supplementary means of identifying the type of hazard of the material contained in the system.

Pipe markers are designed to meet or exceed ASME (ANSI) A13.1-2007 recommendations for size, colour and visibility.

OSHA

29 CFR 1910.253 Oxygen-fuel gas welding and cutting (d)(4)(ii) Aboveground piping systems shall be marked in accordance with the American National Standard Scheme for the identification of piping systems, ANSI A13.1

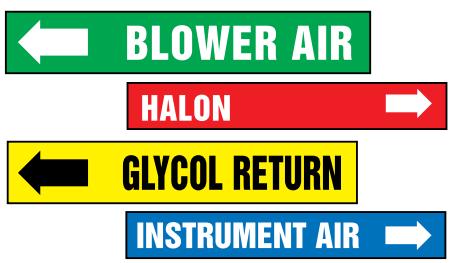
1910.261 Pulp, paper, and paperboard mills (a)(3) General incorporation of standards. Establishments subject to this section shall comply with the following standards:

1910.261(a)(3)(ii) Scheme for the identification of piping systems, A13.1

1910.262 Textiles

1910.262(c)(7) Identification of piping systems. Identification of piping systems shall conform to American National Standard A13.1

LETTER HEIGHT & PIPE MARKER SIZES



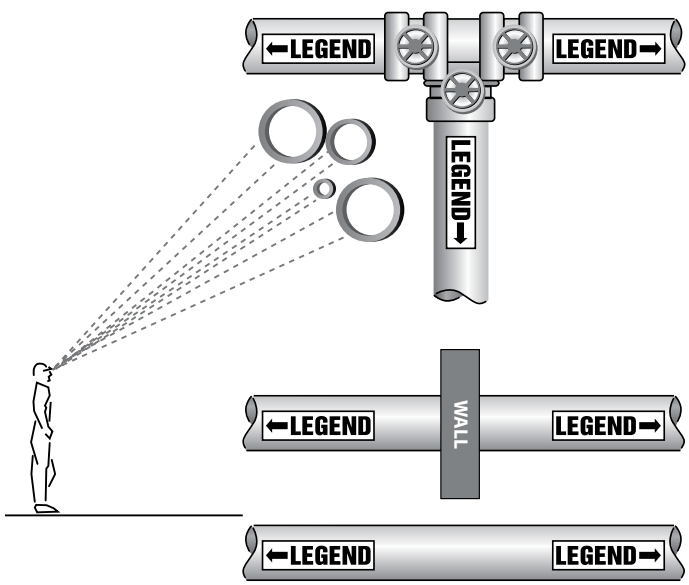
The outside diameter of the pipe determines the letter height and background field length of the marker.

Outside Diameter of Pipe"	Length of Pipe Marker Colour Field"	Size of Letters"
3/4 to 1 1/4	8	1/2
1 1/2 to 2	8	3/4
2 1/2 to 6	12	1 1/4
8 to 10	24	2 1/2
Over 10*	32	3 1/2

*Available as custom pipe markers

LEGEND

The legend on the marker gives the name of the contents in full or abbreviated form. Arrows should be used to indicate direction of flow.



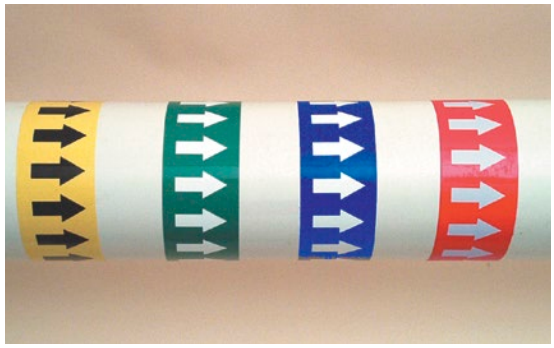
COLOURS

Colours identify the characteristic hazards of the contents of the piping system.

Contents of the Pipe	Colour
Fire Quenching Fluids	WHITE ON RED
Toxic And Corrosive Fluids	BLACK ON ORANGE
Flammable Fluids	BLACK ON YELLOW
Combustible Fluids	WHITE ON BROWN
Potable, Cooling, Boiler Feed, And Other Water	WHITE ON GREEN
Compressed Air	WHITE ON BLUE

VISIBILITY & LOCATION

Where pipe lines are located high or low, place the lettering below or above the horizontal centerline of the pipe. Affix markers onto piping close to valves or flanges and adjacent to changes in direction, branches, and where pipes pass through walls or floors; and at 25' to 50' intervals on long straight pipe runs.



Pipes installed at a distance may make pipe markers difficult to read (refer to the distance reading chart). We can provide larger, legible pipe markers to meet your requirements. Please contact us for solutions.

CEILING FANS

- A major source of untapped energy is available at the ceiling in most industrial and commercial buildings
- Air stratification causes heat build-up at the ceiling as much as 25 °F or more above floor level temperatures
- By installing ceiling fans, this warm air can be recirculated down to floor level to maintain a uniform air temperature from floor to ceiling
- The result saving can be as much as 30 %
- Electro-static white paint
- When ceiling fans are used for cooling people during the summer, they should be spaced 15' to 20' apart in the occupied area
- In warehouse storage areas, best results will be obtained if fans are mounted over aisle ways
- Fans should not be mounted less than 10' above the floor, the use of a safety cable is required on all ceiling fans

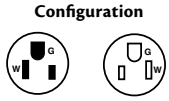
CORROSION RESISTANT DEVICES



Corrosion resistant devices are specifically designed for extremely damp and corrosive environments. They offer additional corrosive resistance because the metal parts (blades, contacts, terminals and screws) are nickel-plated. They have also passed the ASTM (B117.13) 500 hour Salt Spray (Fog) Test.

- Cord clamp seats flush with body for all cable sizes from 10-3 ST to 18-3 SVT (.245"-.700"), providing positive strain relief while preventing damage to cable jacket
- Captive, brass #8 terminal screws are colour coded for easy wiring identification: green (ground), brass (hot) and silver (neutral)

TECHNICAL INFORMATION

EXTENSION CORD RATING DESIGNATIONS

Indented on each Prime® cord is a letter designation that defines the type and approved use of the cord.
You will see that each Prime® extension cord carries one of the following designations.

PRIME® OUTDOOR VINYL EXTENSION CORDS

SJTW (UL) Water Resistant or c(UL) SJTW FT2
STW (UL) Water Resistant or c(UL) STW FT2

PRIME® ALL-WEATHER TPE-RUBBER EXTENSION CORDS

SJEOW (UL) Water Resistant or c(UL) SJEOW FT2
SEOW (UL) Water Resistant or c(UL) SEOW FT2

PRIME® RUBBER EXTENSION CORDS

SJ (UL) Water Resistant or c(UL) SJ FT2
SJO (UL) Water Resistant or c(UL) SJO FT2
SJOW (UL) Water Resistant or c(UL) SJOW FT2
SJTOW (UL) Water Resistant or c(UL) SJTOW FT2
SO (UL) Water Resistant or c(UL) SO FT2
SOO (UL) Water Resistant or c(UL) SOO FT2
SOOW (UL) Water Resistant or c(UL) SOOW FT2
STOW (UL) Water Resistant or c(UL) STOW FT2

S - The "S" at the beginning of all designations states that the cord is a "Hard Service" flexible cord for general use.

P - Parallel construction, usually uninsulated and used in products such as household extension cords, air conditioner cords and low voltage landscape cable.

J - The "J" after the "S" defines the jacket of the cord as being the standard 300 V insulation type currently used on most extension cords. The absence of the "J" defines the cord jacket as an extra hard service 600 V insulation type defined by Prime® as our "Double Jacket" cord because the outer cord jacket is roughly twice the thickness of the "J" jacket that is normally used in outdoor extension cords.

V - Vacuum wire, softer and more flexible than standard "SJT", usually found on retractable cord reels and vacuum cleaner power supply and cords because it holds up to constant winding and unwinding but still maintains its shape.

T or E - This letter defines the material the insulation and jacket are made from. "T" defines the insulating material as PVC (vinyl) thermoplastic. The letter "E" defines the insulation and jacket material as TPE-thermoplastic elastomer rubber.

O - The letter "O" defines the cord as being "Oil Resistant". This was especially designed because most rubber type cords would break down and lose insulating performance when exposed to oil or grease.

W - This letter designates that the cord has been rated for outdoor use. As part of this rating, the different insulation and jacket compounds must meet the following use temperature ranges. UL sets a use temperature range of the "T" PVC vinyl material at -31°F to +140°F (-35°C to +60°C). Prime® has formulated the PVC vinyl compound in our products to exceed this nominal range by approximately 5°F. UL sets a use temperature range of the "E" TPE-rubber material at -58°F to +221°F (-50°C to +105°C). Prime® has also exceeded this range by approximately 12°F.

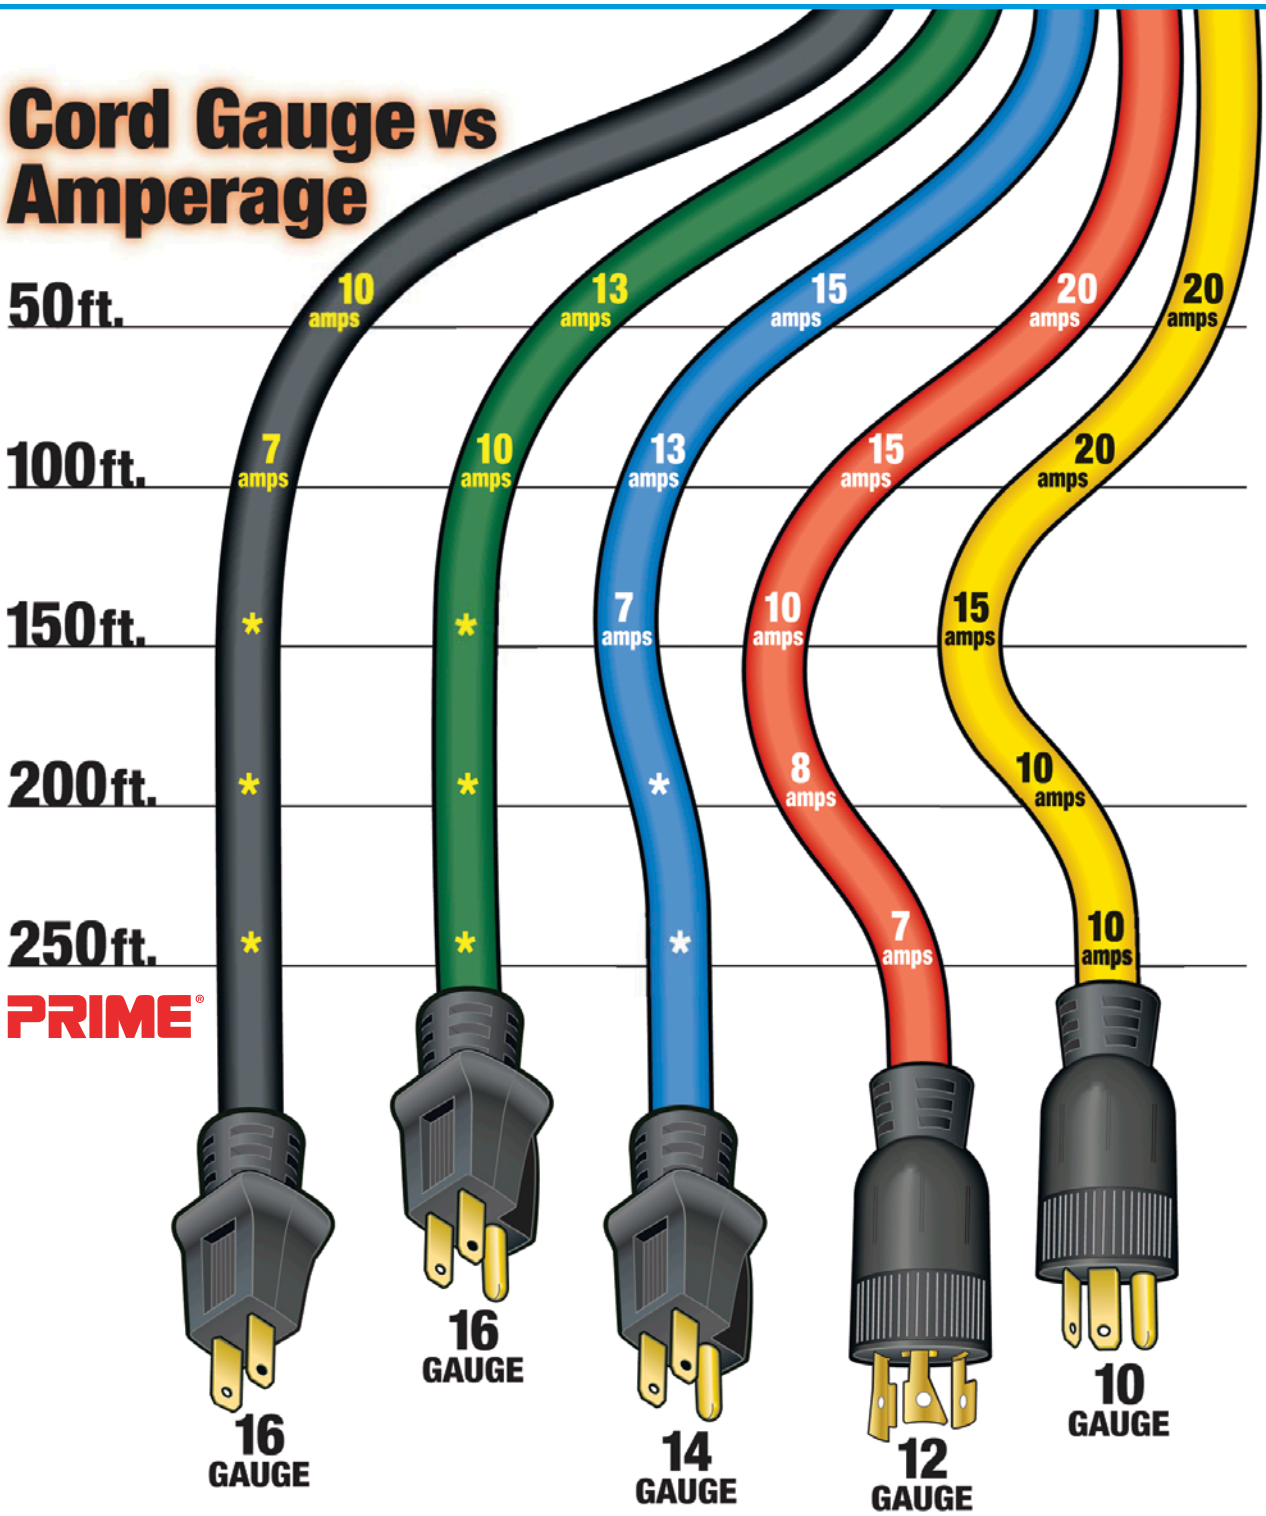
(UL) - This defines the cord as being "Underwriters Laboratories" listed. UL allows the use of the logo in parenthesis rather than a complete circle on round product, like a cord.

Water Resistant - Most of Prime®'s outdoor cords are now made with water resistant material. Standard vinyl and TPE-rubber cords have a tendency to absorb water if left lying in a puddle on the job site. When water comes in contact with the copper wire, it starts to corrode. If the water remains in the cord, it could build up until a shock path is created. When water gets in a cord, its life is shortened.

CSA - Defines the product as meeting "Canadian Standards Association" requirements. The CSA logo is usually not abbreviated.

C(UL) & C CSA US - Since the NAFTA agreement with Canada, UL and the Canadian Standards Association, CSA, have worked together to allow CSA to list products for the USA and for UL to list products for use in Canada. The c(UL) designation says the product was tested and certified by UL to Canadian Standards and the c CSA us mark signifies that CSA tested the product and certifies it to the UL Standards.

FT2 - This letter group defines the product as being flame retardant. If a standard vinyl or TPE-rubber cord catches on fire, the flame can quickly burn the entire length of the cord. The Prime® jacket insulation material will prevent the spread of combustion along the cord. The cord will extinguish the flame within 30 seconds of the heat source being removed.



CL2 - Or "Class 2" is a UL rating for wire that can be used for in-wall construction. Usually applies to communication cable or speaker wire.

SRDT - Is heavy-duty wire made specifically for use with higher amperage equipment such as ranges, dryers and mobile home power hook-up cords. Not very flexible.

HPN - Is high-heat parallel neoprene wire made specifically for use with clothes irons, portable heaters and other such applications where high temperatures of the appliance could affect the power cord's performance.

REFRACTOMETERS

BRIX REFRACTOMETERS

The Brix refractometer shows the concentration percentage of the soluble solids content (Total solids) of a sample (water solution). The soluble solids content is the total of all the solids dissolved in the water - beginning with sugar, salts, protein, acids, etc. and the measurement reading value is the value of the sum total of those. Essentially Brix% is calibrated to the number of grams of cane sugar contained in 100 g of cane sugar solution. So, when measuring a sugar solution, the Brix% should perfectly match the actual concentration.

SALINITY REFRACTOMETERS

Salinity refractometers are useful for measuring the concentration of natural or artificial seawater in aquariums, holding tanks, and breeding ponds. They can also be used for controlling the salt water concentration when preparing pickles, measuring the concentration of salt water used in rinsing and cooking sea products.

BATTERY COOLANT CHECKERS

It is essential to know the concentration and freezing point of anti-freeze coolants for vehicular safety. Keeping a suitable concentration of coolant prevents engine trouble and possible radiator corrosion. This tester monitors the freezing point of both ethylene glycol and propylene glycol; in addition, it indicates battery recharge level. This tester is simple to use; requiring only a few drops to provide accurate readings within seconds. It is virtually indispensable for gas stations, service shops, cab companies, etc.

FORK TILT LEVEL INDICATORS

An incorrect tilt angle of a lift truck's forks is the leading cause of damage to pallets, racking and merchandise. Even the most experienced operators have difficulty judging the correct fork tilt when placing pallets high onto racking. That's why Accu-Tilt displays the fork level at all times to prevent damage and increase productivity by eliminating the guess work.

Additionally, the Accu-Tilt's fork tilt level indicator also specifies the correct fork angle to use when moving a load and when parking the lift truck. This valuable device is easily installed on all makes and models of forklifts and lift trucks.

HAND VACUUM CUPS MANUALLY OPERATED

Hand vacuum cups are designed to handle smooth, nonporous loads such as metal, glass, plastic etc. more effectively and more efficiently. These cups make the task of lifting much easier by allowing less awkward lift points and eliminating pinched fingers. Very easy to use - the lever grip is squeezed together when the cam levers are flipped into position and then rubber pads are securely clamped to surface by vacuum. Just flip back lever(s) to release.

DOCK EQUIPMENT

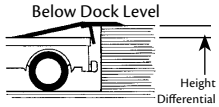
ALUMINUM DOCKPLATES

Skid resistant safety tread deck. Bevelled edges allow smooth access from either end. Bend at upper end permits both ends of plate to lie flat. Steel legs fit between dock and truck; prevent movement when in use. High tensile aluminum alloy construction; no welds to break.



HOW TO ORDER:

1. **Select dockplate width:** add 12" to width of equipment to be used on dockplate.
2. **Determine height differential:** (the vertical distance from dock floor to truck floor) The height differential decides the necessary plate length.
3. **Select the necessary capacity.**

Above Dock Level

Below Dock Level

COMBINATION BOARDS

For a height differential exceeding 11", use a ramp in combination with dockplate. Each plate can be converted to an equivalent-size ramp. Call us with your requirements.

1. Determine required capacity: 90% of gross weight for forklift trucks; 67% of gross weight for powered pallet trucks. Example: Wt. of Forklift + Wt. of Heaviest Load = Gross Weight x .90 = Required Capacity (5,500 lbs. + 10,000 lbs. = 15,500 x .90 = 13,500 lbs.)
2. Select dockboard width: add 12" to width of equipment to be used on dockboard.
3. Determine height differential (the vertical distance from dock floor to truck floor).

ALUMINUM WHEEL RISERS

WHAT TO CONSIDER

1. SIZE – HOW MANY CABLES DO YOU WANT TO PROTECT?

- Protect 1,2,3,4, and 5 cables using the same protector, each slot is known as a "Channel"

What you need to know

- Know the overall diameter of your cables: Make sure that your cables will fit into the cable protector by choosing the proper channel width and height

General Rule to Remember

- Remember that as the number of channels on the protector decreases, the channel height will increase

Is your vehicle clearance height limited?

- Low profile and drop-over models are a quick solution to protect your cables while allowing low vehicle, pedestrian walking, and handicap access

2. LOAD CAPACITY - WHAT WILL BE CROSSING OVER THE CABLE PROTECTOR?

- With capacities up to 800 000 lbs. per axle (load that a vehicle will put on a cable protectors as they drive over them), cable protectors can withstand thousands of pounds and endure constant impact
- Heavy-duty cable protectors are ideal for vehicles or hauling trucks and light-duty cable protectors are best for light to heavy pedestrian walking, light commercial and utility applications

3. CONNECTOR TYPE - INTERLOCKING DESIGN FOR EASY SETUP AND DISASSEMBLE

- Raccordez plusieurs unités pour créer un protecteur de la longueur souhaitée

4. ACCESSIBILITY RAMPS & RAILS

- Most of Checkers® Cable Protectors offer ADA/DDA compliant access ramp

CASTER SELECTION GUIDE

4 FUNDAMENTAL FACTORS TO CONSIDER

REQUIRED LOAD CAPACITY

This is the most important criterion for caster selection. Each caster should have the capacity to support one-third of the total load weight, because overloading, uneven floors and load distribution may place a heavier burden on one or more casters.

MOBILITY NEEDS

The larger the wheel size (and swivel radius), the greater the mobility. The type of bearing selected will also improve mobility and reduce rolling resistance. Neoprene, elastomeric, and urethane wheels offer maximum mobility.

FLOOR CONDITIONS

What are your floors like? Check for rough or uneven surfaces–joints, grates, potholes–and for oil, grease and solvents or a variety of other chemicals or contaminants. In addition, note any carpeted areas or areas where non-marking qualities are critical.

ENVIRONMENTAL CONDITIONS

Check for dust, humidity and temperature extremes. Are the floors littered with debris? Casters with sealed swivels are ideal in areas with sprays or wash-down requirements where there is lint or dust and where extreme quiet is essential.

WHEEL TYPES

Soft Rubber: Offers a smooth, semi-cushioned ride with good floor protection, but can leave black marks on floors. Wears on rough surfaces and can become brittle if left exposed to the elements. Standard colour is black.

Hard Rubber: Economical, easy rolling and durable wheel with adequate impact strength, hard rubber can hold more weight than soft rubber and doesn't mark the floor as easily.

Mold-On Rubber: Offers a semi-cushioned ride, rolls over debris and on uneven surfaces. Tread is soft black rubber that can mark. Performs well on lighter applications but doesn't handle overloading very well.

Pneumatic: Have an outer tire with an inflatable tube, mounted to a metal rim assembly. The inflatable tire offers an exceptional cushioned ride, is light weight and has a great diversity of applications. Limited weight capacity, punctures and marking rubber are disadvantages to consider.

Semi-Pneumatic: Natural black rubber tread on a polyolefin/plastic hub and come standard with ball bearings. These wheels are used in many of the same applications as the full pneumatic wheels, but have the advantage of not going flat.

Polyurethane: Non-marking, popular, lightweight, durable and versatile wheel. Long-lasting tread mechanically bonded to an aluminum core, wears well and are impervious to water (including salt water), resistant to oils, grease, most solvents and chemicals, typically used in commercial, industrial, institutional and food service applications. Offers excellent manoeuvrability, semi-quiet ride, adequate floor protection and good capacity ratings.

Polyolefin: Very durable, inexpensive, holds high capacities, has high shock load impact strength, is sanitary and is impervious to water, resistant to most oils, grease, chemicals and solvents, is non-marking and most of our polyolefin wheels have a slight crowned tread, which offers good roll ability. Great for most applications not needing a cushioned ride and that will not be exposed to heat.

Phenolic: A very hard, durable and versatile wheel. Of all of the hard surface wheels (compared to steel) it provides the best floor protection and is quieter. Good roll ability and are very popular wheels in the industrial, manufacturing, warehousing and bakery industries. Resists oils, grease, gasoline, and most commonly used chemicals and intermittent water exposure. Not recommended for continuous wet applications.

Hi-Temp "Lava" Nylon: Will not crush under heavy loads. It is good for use on all sorts of surfaces from wood to concrete. Will tolerate temperatures from -43°C (-45°F) to 246°C (475°F) and is not affected by most corrosive chemicals.

POLYOLEFIN CASTERS

- Rolls easily on most floors

ROTARY LOBE PUMPS OVERVIEW

Lobe pumps are popular in diverse industries because they offer superb sanitary qualities, high efficiency, reliability, corrosion resistance and good clean-in-place and sterilize-in-place characteristics.

Rotary lobe pumps are non-contacting and have large pumping chambers. If wetted, they offer self-priming performance. A gentle pumping action minimizes product degradation. They also offer reversible flows and can operate dry for long periods of time.

Advantages:
- Pass medium solids
- No metal-to-metal contact
- Superior CIP/SIP capabilities
- Long term dry run (with lubrication to seals)
- Non-pulsating discharge

Wetted components:
Aluminum, Buna-N, cast iron, chrome plated, polypropylene, steel and zinc.

- For use with most low viscosity and non-corrosive petroleum based fluids
- Dual directional operation for rapid discharge
- Fits 55-gallon drums with a 2" bung adaptor

ROTARY TYPE DRUM PUMPS

ROTARY VANE PUMPS OVERVIEW

While vane pumps can handle moderate viscosity liquids, they excel at handling low viscosity liquids such as LP gas (propane), ammonia, solvents, alcohol, fuel oils, gasoline and refrigerants. Vane pumps have no internal metal-to-metal contact and self-compensate for wear, enabling them to maintain peak performance on these non-lubricating liquids. Vane pumps are noted for their dry priming, ease of maintenance, and good suction characteristics over the life of the pump.

Advantages

- Handles thin liquids at relatively higher pressures
- Compensates for wear through vane extension
- Sometimes preferred for solvents, LPG
- Can run dry for short periods
- Can be equipped with a gasket or a stuffing box
- Develops good vacuum

SAFETY DO'S

Care & Maintenance

- Inspect the rails of Fibreglass Ladders for weathering due to UV (ultraviolet) exposure.
- Keep the ladder protected from heat, weather, and corrosive materials.

Safety Before You Climb

- Use fibreglass ladders if there is even a remote possibility of working near electricity or overhead power lines. Fibreglass is electrically non-conductive.
- NEVER use metal, water logged or dirty wood ladders near electricity!

PIPE FITTINGS

There are many variations of fittings to suit a wide range of applications, providing the versatility to achieve any structural configuration. Kee Klamp® fittings are galvanized malleable iron castings designed to suit eight sizes of tube.

A standard hex key and tube cutters are the only tools required to create strong, rigid structures.

Recessed set screws, tightened by the hex key, firmly lock the tube into the fitting.
The set screw is manufactured in case hardened steel and is coated to protect against corrosion.

KEE KLAMP®

- Simple method of constructing tubular structures
- Cost effective alternative to welding
- Galvanized to resist corrosion

WIRE MESH PARTITION COMPONENTS

Everything necessary to create your own custom enclosure. Fast and easy assembly, multiple sizes available. Please follow these guidelines for determining the components required.

1. UNIVERSAL POSTS

A post must be placed at each end of every panel (or of every stack of panels). Be sure to calculate an extra 2" of overall wall length for each post added. When a post meets an existing wall, add one **KD115** wall bracket for proper support (fasteners are included with **KD115** to mount to post, not to wall).

Universal Posts

KD050	145.00	KH923	167.00	12' 3"	32

2. PANELS

Whenever possible, stacking panels horizontally (one above the other) is more economical than placing them vertically (next to each other) - this is because fewer posts are required for wall support when panels are stacked.

Examples:

- For an 8' high partition, stack two **KD037** (8' x 4') panels horizontally
- For a 10' high partition, stack two **KD037** (8' x 4') and one **KD033** (8' x 2') panel horizontally
- For a 12' high partition, stack three **KD037** (8' x 4') panels horizontally

3. ADJUSTABLE FILLER PANELS

Adjustable filler panels fill in blank spots on the ends of wire mesh partitions to plug up potential security risks. Filler panels come in two sizes: 1' x 4' and 1' x 8' that slide over the ends of existing wire mesh sections. Bolt holes on the filler panels are separated per every inch and allow the filler panel to fill in a space between 6" and 10" wide. The holes line up with holes on the existing panel which are drilled in at the top and bottom to securely fasten the filler panel in two places.

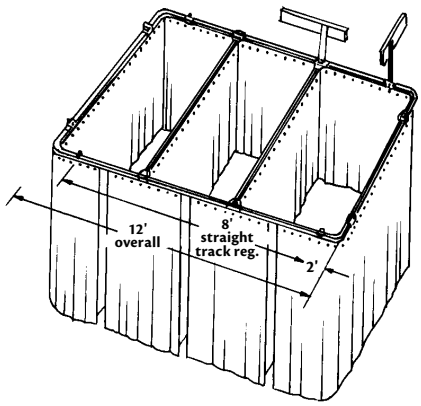
- Large selection of drape material can be utilized with any curtain

DESIGN YOUR OWN CURTAIN

Curtains - Take exact length of area of enclosure and add 10% fullness for proper draping. Then multiply length and height to obtain square footage. Curtains hemmed on top and two sides 2" pocket on bottom side. Brass grommet spacing must be specified when placing an order. Refer to model number for square footage cost of fabric required.



Track - Straight and curved. Straight track available in 5' and 10' lengths. Curved corners are 3' long with 2' radius welded splicer on each end included. When using a curved track, length is increased by 2', e.g. 8' straight track with a curve at each end overall = 12'.

Carriers - Since curtains are made to any length be sure to add one additional carrier to actual length of curtain ordered. For example every 10' of curtain is fabricated with 11 grommets on top side. Therefore 11 carriers are required. A double carrier should be used at the beginning of each curtain. Steel roller carriers are permanently lubricated enclosed bearings.

Clamps - Available for flush ceiling/beam mounting and floor mounting. Clamps can also be used as track splicers. All fasten with supplied Allen bolts. Order sufficient clamps to support track every 5'.

Standards - When free standing uprights are required, be sure to specify clamps for fastening track on posts **KB032** (Posts are required every 8'). Other custom heights on application.

Note: All posts should be lagged or welded to floor as required.

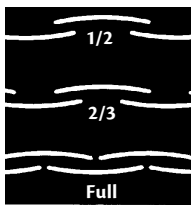
FIXED MOUNTING SYSTEM

Model No.	Description	Price/Each
KF001	Complete 4' aluminum angle mount	49.99

CUSTOM STRIP DOORS

In some applications strip curtain door kits can not be used. However, custom doors can be designed to fit your application. Generally strip curtain material is available in 8" and 12" standard and low temperature versions. Commonly used mounting hardware includes universal mount aluminum angle, straight roller track and hinged roller track. For special applications the "ordering information" provided will help you determine the type of system you will require. Our customer service representatives are also available, should you require any assistance. Please call for special pricing whenever square footage is required.



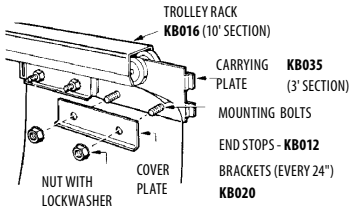
ORDERING INFORMATION

1) Determine the type of mounting system required: angle mount or sliding door. Other custom doors can be designed.
2) Choose overlapping requirement based on the location and type of traffic involved.
3) Measure door opening giving proper allowances for the type of mounting system.
4) Calculate approximate amount of square feet required.

OVERLAPPING METHODS

Overlapping with Kleton custom doors offers three basic overlap methods. With holes on 1" centres, almost any overlap is possible. Our standard doors under 6' x 8' use 1/2 overlap. Doors over 8' x 8' use 2/3 overlap.

1/2, 2/3 overlap are the most common and are recommended for moderate temperature differential and personnel equipment passage. Full overlap is recommended for large temperature differentials and light winds, also ideal for noise control and doors in excess of 12' high.



FIXED MOUNTING SYSTEM

Universal aluminum angle mount can be used for both wall or lintel mount applications. Measure door opening, for wall mount add 6", lintel mounts use exact dimension. Angle comes in 4' sections, please indicate if a solid one length angle is required. All hardware included.

SLIDING STEEL DOOR MOUNT

Strips are attached to a trolley assembly. The mechanism enables removal of strip material from door opening. Allowing unobstructed traffic movement. The "curtain-like" structure can be parted on either side or in the middle. Allow sufficient wall space on either side of door as needed. Track available in 5' or 10' lengths, cut lengths available. Trolley assembly available in 2' and 3' length with steel wheels, all trolleys interconnect. Also available in hinged roller track for curved door systems.

BOX SEALING TAPES

Adequate packaging of goods for distribution and preservation is critical. A package that fails to protect its contents against damage causes much waste in corporate processes as well as increasing municipal solid waste disposal as the goods must be thrown away. Good quality box sealing tape offers consistent packaging performance, cost effectiveness and clean efficient looking packages.

ACRYLIC BOX SEALING TAPE

- Quality acrylic adhesive tape provides consistent performance
- Ideal for long term storage and lightweight carton sealing
- Works well in extreme temperatures
- Will not yellow with age
- Colour: Clear

DESICCANTS

Moisture control: The desiccant absorbs moisture vapour through the capillary action of the absorbent particles. Neither the particles, nor the bag that contains the particles, is changed physically by the absorption action. As well, the container does not become saturated, therefore it doesn't soften or liquefy during use. And metal parts touching the bag will not corrode.

Dust-free: Tyvek bags are ideal for applications where dust must be kept to a minimum. Examples include computer components, packaged chemicals, and photographic and optical devices.

ROPES

A. POLYPROPYLENE

Polypropylene makes a flexible and lightweight rope. It is rot proof, resists oil, water, gasoline and most chemicals. It is the only rope fibre that floats. Available twisted or braided. This fibre is a perfect economical choice as a general purpose rope.

B. NYLON

Nylon is known for its elasticity and tremendous shock absorbing properties.
It has good abrasion resistance, is rot proof, resists oil, gasoline, and most chemicals. It has good resistance to UV (ultraviolet) rays. Nylon will last 4-5 times longer than natural fibres.

C. SISAL

Sisal fibres come from the Agave and Sisalana plants grown in some tropical countries. Sisal has many of the characteristics of manila, but offers only 80% of its strength. It is more economical than manila, and makes a good choice as a general purpose rope. It is commonly used as a tying twine.
